

Who we are

GEIR represents the European waste oil re-refining industry, which collects waste oils and re-refines them into valuable lubricant base oils.

Our mission

To raise awareness about the essential role of the re-refining sector in the circular economy.

Our vision

A sustainable world where all waste oils are re-refined.

We represent

80% of the European waste oil Re-refining industry

16 Companies

11 European countries

Key Recommendations

Setting EU-wide mandatory targets for **collection and re-fining**

Promoting a **high level of recycled content** in lubricants

Adopting **efficient Extended Producer Responsibility (EPR)** schemes

Key Facts about Re-refining

- Waste Lubricant Oils can be re-refined an indefinite number of times.
- Re-refined Base Oils perform at the level of virgin base oils.
- Re-refining delivers a positive environmental impact vs other treatment methods.

Less CO2 emissions

-71% compared to processing virgin crude oil

-47% compared to the treatment of fuel oil

-59% fewer pollutants compared to the treatment of fuel oil

Only **60%** of collected waste oils are re-refined; the rest is used as fuel
